

# Jeeho Shin

(332) 733-7337 | js7145@columbia.edu | linkedin.com/in/jeehoshin | github.com/JHshin6688

## EDUCATION

---

### Columbia University

MS in Computer Science (ML Track)

New York, NY

Expected Dec 2027

### Korea Advanced Institute of Science and Technology (KAIST)

BS in Computer Science

Daejeon, KR

Aug 2026

Courses : Machine Learning, Computer Vision, Graph Mining, Information Retrieval, Database, Artificial Intelligence

## SKILLS

---

**Programming Languages:** Python (Proficient), Java (Intermediate), C (Intermediate), JavaScript (Intermediate)

**Frameworks & Libraries:** FastAPI, LangChain, LangGraph, PyTorch, Transformers, TRL, React

**Infrastructure & Tools:** Docker, Vercel, Fly.io, Langfuse, LangSmith, Supabase, PostgreSQL, WandB, Jira, Confluence

**Languages:** Korean (Native), English (Fluent)

## EXPERIENCE

---

### AI R&D Intern

NC AI

Seongnam, KR

Sep 2025 – Feb 2026

- Developed an evaluation system for RAG chatbot responses by fine-tuning an open-source LLM with GRPO method, removing dependence on external LLM calls to protect user privacy
- Implemented context-aware decoding with Transformers library to produce training data and crafted an evidence-grounded reward function for model training via TRL
- Reached 86.3% agreement with human evaluators, an 8.8% improvement over standard RAGAS metrics
- Deployed fine-tuned model via Docker for production serving, reducing evaluation time by 20%

### Undergraduate Researcher

KAIST AI

Seoul, KR

Jan 2025 – Aug 2025

- Identified underutilized user reviews in multimodal recipe recommendation systems and designed a 3-stage framework for incorporating review signals
- Constructed a data pipeline using LLM and VLM to produce informative summaries of users and recipes from images, descriptions, and reviews
- Utilized graph propagation and cross-view contrastive learning to align multimodal and learnable features
- Achieved 7 to 15% Recall@10 gains over 8 baselines while cutting training time and VRAM usage by 3x

## PROJECT

---

### LionPlanner (Link)

- Built a full-stack course-planning web app end-to-end, combining a LangGraph-based agentic chatbot, FastAPI backend, and Supabase vector search, then deployed it to production on Vercel and Fly.io
- Scraped syllabi and reviews for 36 Columbia CS courses and created a workload-scoring pipeline across 5 dimensions, grounding each score in verbatim evidence with anchor calibration
- Engineered an agentic workflow generating responses via semantic search, degree-requirement lookup, and schedule-conflict-check tools for context-aware course recommendation
- Evaluated course recommendation quality with an LLM-based evaluator across 100 queries, scoring an average of 4.35/5

## LEADERSHIP

---

### Unit Leader

- Directed an 8-person team for 4 months during mandatory military service in the Republic of Korea
- Flawlessly organized 5 national ceremonies welcoming foreign heads of state under strict protocol
