EDUCATION

Columbia University
MS in Computer Science
Machine Learning Track

New York, NY
Aug 2026 — Dec 2027

Korea Advanced Institute of Science and Technology (KAIST)
BS in Computer Science
Courses : Machine Learning, Graph Mining, Information Retrieval, Database

Daejeon, KR
Aug 2026

EXPERIENCE

NC AI
AI R&D Intern

Seongnam, KR
Sep 2025 – Feb 2026

- Built an evaluation system for chatbot responses using LangChain and LLM-generated personas
- Integrated the system into a LangGraph RAG chatbot, enabling efficient data evaluation through Langfuse
- Reduced evaluation time by 20% and improved alignment with human judgment by 30% over standard RAGAS
- Developed a framework that fine-tunes Qwen3 with the GRPO method for a privacy-focused evaluation system

KAIST AI
Undergraduate Researcher

Seoul, KR
Jan 2025 – Aug 2025

- Developed multimodal recipe recommendation models in PyTorch, with findings published at SIGIR 2026
- Implemented a data pipeline using LLaMA and LLaVA to convert user reviews and multimodal recipe data into informative textual summaries
- Built a framework that trains user and recipe embeddings by utilizing graph-based message propagation and cross-view contrastive learning
- Achieved approximately 10% improvement in Recall over recipe recommendation baselines

PROJECTS

LionPlanner ([Link](#))

- Built a full-stack web app that helps Columbia students plan course schedules and evaluate semester workload
- Developed a data pipeline that scrapes course syllabi and reviews with Firecrawl, uses parallel LLM chains to analyze workload across multiple aspects, and stores results in Supabase
- Implemented an agentic workflow with LangGraph, combining an LLM router and a tool-calling RAG agent for course recommendations and schedule-grounded workload analysis

ListenUp ([Link](#))

- Built a Chrome extension enabling blind and low-vision users to interpret web content through AI-generated audio summaries, improving web accessibility for click-to-listen navigation
- Implemented the web content summarization pipeline using LangChain Mistral AI, converting raw page content into concise, context-aware summaries for text-to-speech playback
- Collaborated in a team of four and awarded the Best AI Project with Databricks Open Source at HackTX 2024

SKILLS

Programming Languages	Python, C, Java
Frameworks	LangChain, LangGraph, PyTorch, Transformers, TRL, FastAPI, PostgreSQL
Developer Tools	WandB, Langfuse, Jira, Confluence
Languages	Korean (Native), English (Fluent)
